EDITORIALS

The 2nd UK Stroke Forum delivers diverse programme of research and information **4**

Kate Radford attended the biggest interdisciplinary stroke conference in the world, and reports the key messages, research findings and highlights from the 3-day event in Harrogate, UK.

Occupational therapy awareness: Where are we now? **6**

Following the British Occupational Therapy awareness week at the end of last year, Nancy Kingsland and Angela Wilson discuss the reactions that students had when gauging public opinion on the profession and debate the importance of professional awareness, both in the UK and abroad.

CLINICAL

Physical interventions for managing aggression in mental health: Should physiotherapists be involved? **8**

In light of growing concern about the level of violence on psychiatric wards, Brendon Stubbs et al discuss the use of physical interventions in mental health services and present a case for more involvement of physiotherapists in this area.

An audit of botulinum toxin therapy services for adult spasticity **15**

Mohamed Sakel presents findings from the first audit exploring a new spasticity service, which included one botulinum toxin injector; the consultant. The potential for non-medical injectors, such as physiotherapists, in this context is discussed.

Commentary: Davina Richardson

Measuring occupational performance and client priorities in the community: The COPM **22**

AEK Roberts et al recognized that an outcome measure which identified and focused on clients' occupational goal priorities was necessary in the study setting; an NHS community trust. Here they detail results of a study exploring the use of the COPM in the various community settings in the trust, and highlight the different findings in various patient groups.

Commentary: Davina M Parker

Phase II cardiac rehabilitation improves quality of life in Iranian patients after CABG **31**

Behrooz Attarbashi Moghadam et al examined the effects of the phase II cardiac rehabilitation programme in patients referred to the Tehran Heart Center in Iran. Encouraging results in quality of life are reported.

An occupational therapy income-generation group for HIV-positive women in Uganda: Part 1 **38**

In the first article of a two-part series, Moses Kamba and Sue Rugg explore research on support group attendance, social support for HIV-positive people and the value of income-generation activities for women in developing countries. The 2nd part will present findings from a study on client views of an occupational therapy income-generation group in Kenya.

EQUIPMENT

Slings and things: The importance of assessment **44**

Pat Alexander explores the use of slings in hoists in clinical settings and the rise of injuries resulting from user error. Findings of a small survey examining the involvement and knowledge of staff in sling prescription are then presented.
